VisiLevel provides remote access to onboard fuel load data

Turriff Fuels has been providing fuel for over 25 years across Aberdeenshire and recently took delivery of VisiLevel to use on one of its fleet.

VisiLevel is a unique gauging system that accurately outputs the product volume, temperature, density and colour of each individual compartment; the information is automatically displayed on the VisiLevel LCD screen and clearly advises the driver of each compartments contents.

Ian Brown, Managing Director at Turriff Fuels said: "We made the decision in 2018 to invest in VisiLevel as we felt that this would help benefit our business. The automatic product recognition of each compartment ensures that driver keying errors are not possible, and the risk of cross-contamination is protected against."

Ian continued: "VisiLevel integrates with our cloud-based system and enables us to see remotely how much product is left onboard the vehicle at any time. This is

particularly beneficial to us as a business; our drivers can be in rural Aberdeenshire and some distance from our depot, but by accessing the cloud we can see how much product is left onboard the vehicle and as required we can re-route drivers to meet any local demand – ensuring that we can provide our customers with a service that is second to none."

Turriff Fuels

- Family owned and managed business based in Turriff in Aberdeenshire, supplying oil, tanks and lubricants for haulage, agriculture and domestic use for over 25 years
- Turriff Fuels has seen the benefits of VisiLevel and in late 2019 they will be expanding the fleet and adding MechTronic's electronic metering system OptiMate and VisiLevel to one vehicle with another two vehicles in 2020 as part of Turriff Fuels fleet upgrade
